Cautionary statements

This presentation has been prepared by Rio Tinto plc and Rio Tinto Limited ("Rio Tinto"). By accessing/attending this presentation you acknowledge that you have read and understood the following statement.

Forward-looking statements

This document, including but not limited to all forward looking figures, contains certain forward-looking statements with respect to the financial condition, results of operations and business of the Rio Tinto Group. These statements are forward-looking statements within the meaning of Section 27A of the US Securities Act of 1933, and Section 21E of the US Securities Exchange Act of 1934. The words "intend", "aim", "project", "anticipate", "estimate", "plan", "believes", "expects", "may", "should", "will", "target", "set to" or similar expressions, commonly identify such forward-looking statements.

Examples of forward-looking statements include those regarding estimated ore reserves, anticipated production or construction dates, costs, outputs and productive lives of assets or similar factors. Forward-looking statements involve known and unknown risks, uncertainties, assumptions and other factors set forth in this presentation.

For example, future ore reserves will be based in part on market prices that may vary significantly from current levels. These may materially affect the timing and feasibility of particular developments. Other factors include the ability to produce and transport products profitably, demand for our products, changes to the assumptions regarding the recoverable value of our tangible and intangible assets, the effect of foreign currency exchange rates on market prices and operating costs, and activities by governmental authorities, such as changes in taxation or regulation, and political uncertainty.

In light of these risks, uncertainties and assumptions, actual results could be materially different from projected future results expressed or implied by these forward-looking statements which speak only as to the date of this presentation. Except as required by applicable regulations or by law, the Rio Tinto Group does not undertake any obligation to publicly update or revise any forward-looking statements, whether as a result of new information or future events. The Group cannot guarantee that its forward-looking statements will not differ materially from actual results. In this presentation all figures are US dollars unless stated otherwise.

Disclaimer

Neither this presentation, nor the question and answer session, nor any part thereof, may be recorded, transcribed, distributed, published or reproduced in any form, except as permitted by Rio Tinto. By accessing/attending this presentation, you agree with the foregoing and, upon request, you will promptly return any records or transcripts at the presentation without retaining any copies.

This presentation contains a number of non-IFRS financial measures. Rio Tinto management considers these to be key financial performance indicators of the business and they are defined and/or reconciled in Rio Tinto's annual results press release and/or Annual report.

Reference to consensus figures are not based on Rio Tinto's own opinions, estimates or forecasts and are compiled and published without comment from, or endorsement or verification by, Rio Tinto. The consensus figures do not necessarily reflect guidance provided from time to time by Rio Tinto where given in relation to equivalent metrics, which to the extent available can be found on the Rio Tinto website.

By referencing consensus figures, Rio Tinto does not imply that it endorses, confirms or expresses a view on the consensus figures. The consensus figures are provided for informational purposes only and are not intended to, nor do they, constitute investment advice or any solicitation to buy, hold or sell securities or other financial instruments. No warranty or representation, either express or implied, is made by Rio Tinto or its affiliates, or their respective directors, officers and employees, in relation to the accuracy, completeness or achievability of the consensus figures and, to the fullest extent permitted by law, no responsibility or liability is accepted by any of those persons in respect of those matters. Rio Tinto assumes no obligation to update, revise or supplement the consensus figures to reflect circumstances existing after the date hereof.

Production instability at RTIT an opportunity to improve in 2019

- 2 furnaces currently being rebuilt at Rio Tinto Fer et Titane

Portfolio simplification through divestments of coking coal and Rössing Uranium

Full recovery from strike at IOC

Productivity accelerating in 2019

Post-tax mine-to-market (M2M) productivity programme \$ billion (free cash flow)

2018 M2M additional free cash flow fully offset by raw material cost headwinds, primarily related to Aluminium

2018 invested in capabilities and technology for future productivity

2018 run rate of **\$0.4 billion** with additional **\$0.6 billion** M2M free cash flow expected in 2019

Maintain M2M free cash flow target of **\$1.5 billion** run-rate from 2021

Disciplined capital allocation

1 | Essential
sustaining capex

2 | Ordinary
dividends

3 | Iterative
cycle of

Our strong balance sheet gives us resilience and flexibility

Net debt \$ billion

Net cash of \$0.3 billion

Committed cash outflows for 2019 will result in adjusted net debt of \$8.0 billion**:

- \$4.0 billion return of Grasberg and Dunkerque proceeds via special dividend
- \$1.7 billion in buy-backs previously announced in 2018
- \$0.4 billion for lag in Australian tax payments
- \$0.9 billion coal disposal tax payment
- New leasing accounting standard to come into effect from January 2019, increases net debt by \$1.2 billion (non-cash)

* Adjusted Dec-2017 net debt of \$7 billion included announced buy-backs relating to the Coal & Allied proceeds and the Australian tax lag

** Numbers are rounded to the closest \$0.1bn | *** As at February-2019 | **** Gearing ratio = net debt / (net debt + equity)

Disciplined ramp-up of investments

Capital expenditure profile \$ billion

Maintained sustaining capital guidance of \$2.0 to \$2.5 billion per year, including:

- Iron Ore sustaining capex of ~\$1 billion per year

Pilbara replacement capital includes Koodaideri and Robe River mine developments from 2019

All capital decisions go through rigorous evaluation and challenge

Development capital delivers 2% CAGR (2019 – 2023)

The industry fundamentals are robust with Rio Tinto leading the way

Capex / Depreciation and amortisation*

Gearing (Net debt / (Net debt + equity))*

* Diversifieds peer group includes BHP, Glencore, Vale and Anglo American (Excludes Rio Tinto). Net debt for gearing calculated as current and non-current borrowings, less cash.
 Source: FactSet. The principal difference between Rio Tinto's H2 2018 net cash of \$0.3bn and the above view of H2 2018 net debt is due to the treatment of highly liquid financial assets held in managed investment funds

Superior cash returns declared of \$13.5 billion in 2018

Appendix

27 February 2019

London

Higher aluminium and RTIT prices partly offset by lower iron ore prices

Underlying EBITDA 2017 vs 2018
\$ million

* Aluminium includes alumina and bauxite and includes movements in market and other premia

Strong sales in iron ore, copper, gold and aluminium

Underlying EBITDA 2017 vs 2018
\$ million

Iron Ore

maintaining our competitive advantage

Pilbara cash unit cost
\$ per tonne

2018 cash unit cost of \$13.3/t (\$0.1/t lower than 2017)

Focus on maintaining strong EBITDA margins (68% in 2018, in line with 2017)

Productivity initiatives and weakening Australian dollar in 2018 offset:

- Steeper hauls
- Higher diesel, labour and maintenance costs

Average realised FOB price of \$57.8 per wet metric tonne (\$62.8 per dry metric tonne)

2019 guidance for shipments from the Pilbara remains unchanged at 338-350Mt, subject to market conditions and any weather constraints

Iron Ore

lower prices partly offset by higher volumes

Underlying EBITDA 2017 vs 2018

\$ million

- Our Pilbara mines produced 338 million tonnes in 2018 (282 million tonnes as Rio Tinto's share) – 2% higher than 2017. This increase came from expanded mines and minimal weather interruptions compared to 2017
- Pilbara FOB EBITDA margins of 68% achieved in 2018 (68% in 2017)
- Pilbara cash unit costs were \$13.3 per tonne in 2018, compared to \$13.4 per tonne in 2017
- Pilbara iron ore revenues includes \$1.7 billion of freight in 2018 compared to \$1.5 billion in 2017
- Approximately 68% of sales in 2018 were priced with reference to the current month average, 17% with reference to the prior quarter's average index lagged by one month, 5% with reference to the current quarter average and 10% were sold on the spot market
- Approximately 32% of our sales were made on an FOB basis with the remainder sold including freight

Aluminium

higher prices and volumes offset by raw material cost headwinds

Underlying EBITDA 2017 vs 2018

\$ million

- Aluminium underlying EBITDA of \$3.1 billion declined by 10% compared with 2017. Stronger prices in H1 2018 were more than outweighed by the impact of legacy alumina sales contracts, raw material cost inflation and lower aluminium volumes
- The average realised price per tonne averaged \$2,470 in 2018 (2017: \$2,231)
- The 2018 cash LME aluminium price averaged \$2,110 per tonne, an increase of 7% on 2017
- The mid-West premium rose 111% to \$419/tonne (2017: \$199/tonne), driven by the 10% US tariff implemented on 1 June which is included in our operating costs
- VAP represented 57% of the primary metal we sold (2017: 57%) and generated attractive product premiums averaging \$224/tonne of VAP sold (2017: \$221/tonne)
- EBITDA margins were 32% in 2018, compared to 35% in 2017
- Bauxite revenues includes \$371 million of freight in 2018 (\$266 million in 2017)
- In 2018, we sold the Dunkerque aluminium smelter in France to Liberty House for \$0.4 billion, net of completion adjustments, and a wharf and land in Kitimat, British Columbia to LNG Canada for \$0.6 billion

Copper & Diamonds

strong operational performance

Underlying EBITDA 2017 vs 2018

\$ million

- Underlying EBITDA of \$2.8 billion was 46% higher than 2017. Our strong performance was primarily driven by increased volumes of copper and gold, lower costs linked to productivity improvements at our managed operations, and Escondida running at full capacity after the 2017 strike
- Copper & Diamonds generated \$2.1 billion in cash from operating activities, a 25% increase on 2017. This included \$786 million of dividends from Escondida. Working capital, productivity and cost management initiatives also contributed to favourable cash flows
- Average copper prices increased 6% to 297 US cents per pound, and the average gold price rose 1% to \$1,269 per ounce compared with 2017. Price changes, including the effects of provisional pricing movements, resulted in a \$25 million decrease in underlying EBITDA compared with 2017
- At 31 December 2018, the Group had an estimated 240 million pounds of copper sales that were provisionally priced at 277 cents per pound. The final price of these sales will be determined during the first half of 2019. This compares with 250 million pounds of open shipments at 31 December 2017, provisionally priced at 304 cents per pound

Energy & Minerals

higher prices offset by coal disposal and one-off disruptions

Underlying EBITDA 2017 vs 2018

\$ million

- Underlying EBITDA of \$2.2 billion was 22% lower than 2017. Excluding the entire contribution from coal in both years, 2018 EBITDA of \$1.3 billion was 18% lower than the 2017 comparative of \$1.6 billion
- Coal EBITDA included a \$278 million gain from the sales of the Winchester South and Valeria coal development projects and a \$167 million pre-tax gain from the revaluation of a royalty receivable arising from the disposal of the Mount Pleasant coal project in 2016
- Net operating cash flows of \$1.3 billion were 35% lower than 2017
- We completed the sale of the Kestrel and Hail Creek coking coal mines and the Valeria coal and Winchester South development projects by 1 August 2018 for headline proceeds of \$4.15 billion, and expect to pay ~\$0.9 billion in tax on these disposals to the Australian Taxation Office in H1 2019
- Excluding the entire contribution from coal in both years, 2018 net operating cash flows of \$0.9 billion was 19% lower than the 2017 comparative of \$1.1 billion.

Other movements in underlying EBITDA

Underlying EBITDA impact

\$ million	2017	FX/ price	Energy & Inflation	Volumes	Cash costs	E&E	Non-cash	Interest, tax, other	2018
Other operations	(116)	121	(117)	6	(31)	-	2	64	(70)
Exploration & Evaluation (net)	(218)	2	1	-	-	(17)	-	-	(231)
Other	(736)	-	3	-	(22)	-	(43)	(153)	(952)
Total	1,070	123	(113)	6	(53)	(17)	(41)	(89)	1,253

- Other operations includes the Gove alumina refinery (curtailed in May 2014), Rio Tinto Marine and Legacy projects
- Central exploration & evaluation costs higher due to increased activity levels, primarily at Resolution
- The increased loss in Other primarily relates to a \$95 million rise in restructuring, project and other one-off costs and a \$60 million increase in central pension costs and insurance. It also reflects an increase in our information system and technology spend and continued investment in capability to support our mine-to-market productivity programme

Near-term maturities further reduced in 2018

31 December 2018 debt maturity profile*
\$ million

Gross debt reduced by \$2.3 billion in 2018 to ~\$13 billion

\$1.9 billion nominal value of bonds purchased in 2018

Average outstanding debt maturity of corporate bonds at ~13 years (~ 11 years for all Group debt)

No bond maturities until 2020

Modelling EBITDA

Underlying EBITDA sensitivity	2018 average price/ rate	(\$m) impact on FY 2018 underlying EBITDA of 10% price/rate change
Copper	297c/lb	388
Aluminium	\$2,110/t	612
Gold	\$1,269/oz	46
Iron ore (62% Fe FOB)	\$61.2/dmt	1,566
A\$	75USc	721
C\$	77USc	354
Oil	\$71/bbl	78

Note: The sensitivities give the estimated effect on underlying EBITDA assuming that each individual price or exchange rate moved in isolation. The relationship between currencies and commodity prices is a complex one and movements in exchange rates can affect movements in commodity prices and vice versa. The exchange rate sensitivities include the effect on operating costs but exclude the effect of revaluation of foreign currency working capital.

Modelling aluminium costs

Canadian* smelting unit cash** cost sensitivity

(\$/t) Impact a \$100/t change in each of the input costs below will have on our 2018 Canadian smelting unit cash cost of \$1,533/t

Alumina (FOB)	191
Green petroleum coke (FOB)	34
Calcined petroleum coke (FOB)	30
Coal tar pitch (FOB)	7

* Canadian smelters include all fully-owned smelters in Canada (Alma, AP60, Arvida, Grande-Baie, Kitimat, and Laterrière), as well as Rio Tinto's share of the Becancour and Alouette smelters | ** The smelting unit cash costs refer to all costs which have been incurred before casting, excluding depreciation but including corporate allocations and with alumina at market price, to produce one metric tonne of primary aluminium.

Case Study: Active management at Kennecott

South impoundment – closed in 2002

- No longer met seismic hazard design criteria
- Upstream construction method
- Deposition at new North impoundment commenced in 1998
- South impoundment de-weighting work undertaken
- 46 dewatering wells, 200+ horizontal and 1300+ wick drains installed
- Deflection berms installed
- Ongoing work planned

North impoundment – opened 2002-present

- Design review board comprised of international experts
- Designed to +7.25 magnitude earthquake (MCE*)
- Limited water storage and away from crest
- Wide beaches
- Centreline construction method
- Sophisticated monitoring systems:
 - 450+ piezometers for pore pressure monitoring
 - Accelerometers (earthquake detection) – linked to emergency alarms
 - GPS survey for construction monitoring and InSAR+ monitoring for early detection of instability
 - Inclinometers to detect settlement and displacement in slope

Closure, taking the long term view

Committed to closing our assets well

At end 2018, closure and restoration provisions of \$10 billion

Dedicated closure team, in-house R&D

Dedicated team, defined strategy and technical experts to improve closure outcomes and manage legacy sites

Proven closure capability

Leading technical, environmental and community practices in closure:
Holden, a recent example
